

Office 365 + Windows 10 Enterprise

Reach **new levels** of productivity

Microsoft is on a mission to help your enterprise achieve more. This starts with Office 365, which makes sure your team has the most advanced tools at their fingertips. Windows 10 Enterprise multiplies this power by enabling your employees to make the most of Office 365 apps on all their devices, anywhere.

Get more done, faster

From Windows Ink to your digital assistant Cortana, Windows 10 includes new and exciting features that give your Office 365 apps a boost. And it opens the door to using modern Windows 10 devices that help you stay in stride. With Windows 10 devices, you can use a digital pen or voice instead of a keyboard. Touch capabilities are built into all Office 365 apps, so Windows 10 Enterprise and Office 365 can interoperate seamlessly. And users can opt for a 2-in-1 device that transforms from tablet to laptop and be able to work virtually anywhere, in just the way you want.

"We heard repeatedly that they were more productive at home with their own devices than they were at work. Mobility and flexibility; anywhere, anytime access to data; real-time communications; sharing and storing files in a secure manner online—all these capabilities pointed us to Microsoft Office 365."

-Julie Boddy, Business and Technology Improvement Manager,
Service Transformation Department, British Airways

Microsoft Partner

Collaborate on the move

Windows 10 Enterprise interoperates perfectly with OneDrive, SharePoint, and Skype for Business, connecting employees so they can collaborate and get more done, no matter where they are or what device they use. Employees can also sign in with the same username and password to access all their products and devices while maintaining a familiar user experience. And Windows 10 Enterprise saves time by letting employees reset passwords or ask for access to an application on their own, without waiting for the help desk.

Turn thoughts into action

Windows 10 lets employees harness the power of OneNote, Word, and other core Office 365 products. Plus, Windows 10 includes Windows Ink, a new feature that makes your digital pen as easy to use as pen and paper. Ink pairs with Office 365 to let you draw on a screen capture of Word documents, OneNote files, or anything else on your desktop. Now your employees can effortlessly make edits, mark up images, and collaborate on documents as you would with a paper document. And Windows Ink Workspace pulls together all your ink-based apps—including Sticky Notes, Sketchpad, and OneNote—into a single place, making it more convenient to find the best tool for the task at hand.

Put your digital assistant to work

The Cortana digital assistant works with Windows 10 Enterprise to make businesses more efficient and keep them ahead of the competition. This starts with making it easier for employees to prepare for meetings, learn about co-workers, and get meeting reminders so they won't be late. Cortana Analytics Suite takes the next step by helping to analyze data and illuminate ways to improve operations, reduce costs, and predict what's next. Now enterprises can open up amazing new opportunities for their employees—and their customers—to get things done in more helpful, proactive, and natural ways.

A guard dog for your data

Maximizing productivity doesn't mean compromising safety. Device Guard locks down devices against malware. Credential Guard isolates and hardens key systems and user secrets against compromise, helping to minimize the impact and breadth of a Pass-the-Hash attack. Lose your device? Don't worry about also losing company information when you combine Windows 10 devices with Office 365. Business data and files are encrypted. And even without your device, you can access Office 365 documents saved in the Microsoft cloud. You can also rest easy that employees can't share data without permission because you can restrict them from copying protected information into emails and documents.

Increase productivity today with the Secure Productive Enterprise suite

Contact us today to learn more about how combining Windows 10 Enterprise, Office 365, and the Enterprise Mobility + Security solution makes it easier to achieve more, faster than ever before.
